

GUIDE v.46.1 0.250-SE classification tree for predicting **Gender** using estimated priors and unit misclassification costs. At each split, an observation goes to the left branch if and only if the condition is satisfied. V1 = Biacromialdiam. V2 = Bitrochantericdiam. Splits at nodes drawn with **brown** circles are interaction splits. Splits at nodes drawn with **blue** circles are linear splits. Predicted class and sample size (in *italics*) printed below each terminal node; class posterior probabilities for **Gender** = F and M beside node. Second best split variable at root node is Shouldergirth.
