

GUIDE v.46.2 0.250-SE classification tree for predicting *death_5yr* using estimated priors and unit misclassification costs. At each split, an observation goes to the left branch if and only if the condition is satisfied. Symbol ' $\leq$ ' stands for ' $\leq$ or missing'. V1 = TREATMENT_AFTER_SAMPLING. V2 = U CLL_WES. Splits at nodes drawn with gray circles are not statistically significant. Splits at nodes drawn with brown circles are interaction splits. Splits at nodes drawn with blue circles are linear splits. Predicted class and sample size (in *italics*) printed below each terminal node; class posterior probabilities for *death_5yr* = 0 and 1 beside node. Second best split variable at root node is U CLL_WES.
