

GUIDE v.46.2 0.250-SE piecewise-constant proportional hazards regression tree for **surv_5yrs**. At each split, an observation goes to the left branch if and only if the condition is satisfied. Sample size (in *italics*), relative hazard, and median survival time printed below nodes. Terminal nodes with median survival times above and below 60+ (median at root node) are painted **yellow** and **vermillion** respectively. Second best split variable at root node is **X8p_status**.
