

GUIDE v.46.2 importance scoring classification tree for predicting **death_5yr** using estimated priors and unit misclassification costs. At each split, an observation goes to the left branch if and only if the condition is satisfied. An asterisk at a bivariate split indicates that missing values in either variable go to the left node. Symbol ' $\leq_*$ ' stands for ' $\leq$ or missing'. V1 = AGE_SAMPLING. V2 = X17p_status. V3 = EC_EXTENSION. V4 = RAI_AT_DIAGNOSIS. V5 = NORMAL_MEAN_COVERAGE. V6 = X17q_status. V7 = X8p_status. Splits at nodes drawn with blue circles are linear splits. Predicted class and sample size (in *italics*) printed below each terminal node; class posterior probabilities for death_5yr = 0 and 1 beside node.
