

GUIDE v.46.2 importance scoring piecewise-constant 0.900-quantile regression tree for predicting `surv_5yrs`. At each split, an observation goes to the left branch if and only if the condition is satisfied. Symbol '$\leq_*$' stands for '$\leq$ or missing'. V1 = `TREATMENT_STATUS_AT_SAMPLING`. Splits at nodes drawn with gray circles are not statistically significant. Splits at nodes drawn with brown circles are interaction splits. Sample size (in *italics*) and 0.900-quantile of `surv_5yrs` printed below nodes. Terminal nodes with quantiles above and below value of 60 at root node are painted yellow and orange respectively.
